#### NETS FOR THE GULLIBLE Which the United States Postal Authorities are Trying to Break Up.

WASHINGTON, Nov. 10 .- It is said at the post office department that vigorous measures will be taken to break up the fraudulent patent medicine companies operating at South Bend, Ind., which is regarded as a perfect "nest" for these concerns. Two weeks ago the department declared fifty-six companies in that city to be conducting a fraudulent enterprise, and forbade them the use of the United States mails, under penalty of criminal prosecution. The department has been informed that about 200 more fictitious medicine companies at South Bend, presumably operated by a few persons, have been carrying on their business by extensive advertising and using the mails.

"Fraud" orders have consequently been issued against them, and criminal proceedings will be set on foot to punish the persons implicated. This action has been taken by the department upon the complaints of the citizens of South Bend, who protested that the projectors of the scheme were getting immensely rich, and poor and gul-

A fraud order was also issued yesterday afternoon by the department against the Fortune Publishing Co., Detroit, Mich. The mode of operation of this organization was to advertise a word-guessing contest with \$1 entrance. The prize offered was \$20 to each luck guesser, but while the rebus appeared very simple it always happened that no one was able to solve the riddle. The persons connected with the swindle will be ar

#### ANOTHER ISSUE OF BONDS Determined Upon by the President and

Secretary of the Treasury. NEW YORK, Nov. 10.-It was stated on Wall street yesterday that there will be an issue of \$50,000,000 or \$100,-000,000 5-per-cent. government bonds before congress again reassembles.

"When the last issue of \$50,000,000 was made and the public declined to take the bonds, a syndicate of bankers, headed by John A. Stevens, president of the Union Trust Co., made the sale. A banker who was actively interested in that movement makes the

following statement: "There will be an issue of bonds shortly. The president and secretary of the treasury have determined that the gold reserve shall not be further impaired. They have been advised that an export movement of gold will begin in a few weeks, and they accordingly have determined to take prompt measures."

When asked whether a syndicate would be formed which would be guaranteed a commission to float the bonds, he replied: "I do not know. That lies in the discretion of the authorities in Washington. This much is certain, the 5-per-cent. bonds will be issued, probably upon the 3-per-cent. basis as before. They will be offered to the public; but the same gentlemen who made the last issue a success have assured the president that they will carry through the forthcoming issue."

The banker added that if \$50,000,000 bonds was insufficient, \$50,000,000 more would be issued.

On a Murderous Mission. DURANGO, Cal., Nov. 10.-Jesse Haller, who killed Frank Carpenter near Cortez last spring, started out Thursday avowing to kill the entire Carpenter family. He met a brother of Carpenter and a man named Dale, witnesses of the former shooting, and opened fire, killing Carpenter and dangerously wounding Dale. A posse is in pursuit of Haller.

#### STARVING ON THE MOUNTAINS. Chinese Soldiers Suffering from Cold an

Exposure-The Last Stand. SHANGHAI, Nov. 10.-The Chinese army of the north has retreated to the mountains where the soldiers are reported to be starving and suffering se-

riously from cold and exposure. Port Arthur is expected to make a determined stand against the Japanese. Admiral Fremantle, who is in command of the British fleet, considers that Port Arthur will probably be the scene of the last engagement of any importance.

# The Revolution in Rio Grande do Sul Ap-

pears to Be Gaining Ground. RIO DE JANEIRO, Nov. 10.-In the state of Rio Grande do Sul the revolutionists appear to have been making a good deal of headway. The garrisons of San Mateo, Santa Anna and Santa Christo joined the insurgents when these places were captured, and it is now asserted that a conspiracy exists among the fleet, which will bring If this happens have them hung out on three war ships to their side if the revolution continues after this month. In this event it is believed Peixoto will seize the chief command under pretext of putting down the rebellion.

# DOMESTIC CONCERNS.

Chop up cold ham and mix with the veal in the proportion of one- light wood, eight inches square and third ham and two-thirds veal. Add three inches deep. On the back side the cracker, stir in a cup of hot milk, of it we cut an inch hole, in the center, two teaspoonfuls of butter and a beat-en egg. Season to taste. Bake in pate tach two strips (B C and D E) an inch pans lined with puff paste. If eaten wide to fasten it to the wall by. On hot send to table in the tins. If cold, the front side we cut a circle four slip the pates out and pile upon a plate with sprigs of parsley between .- Home.

bread crumbs, mix this with the apples, and then stir in two well-beaten eggs. If the mixture is too thick, add a few spoonfuls of water. Turn into a buttered pudding dish, and bake for forty minutes. Serve with hard sauce. -Good Housekeeping.

## CARE OF TENDER FEET.

The Shoes to Be Worn in Summer-Treatment When Sore and Swollen. First and foremost, the boots and shoes for summer wear should be half a size larger than those worn during the winter. Shoes are generally considered more comfortable than boots, and should certainly be adopted, if possible, in the summer, for they leave the ankle free and the circulation unimpeded. However, if boots must be worn, they should not be very high, as any additional pressure means additional suffering. It is hardly necessary, I hope, to mention that extremely pointed toes and really high heels should never really be thought of by anyone who values peace of mind and comfort. The leather for summer footgear should be light, but not too thin, and brown in preference to black, when brown is suitable to the occa-

The evil effects of tight lacing will be very soon realized by the woman who has tender feet; the undue compression adds tenfold to the pain, and y often the ankles, even of young girls who are silly enough to sacrifice their well-being for the sake of having a waist of eighteen inches, are so swelled and inflamed by the end of the day that they are utterly shapeless.

In cases of this kind the remedy is not far to seek, but it is more difficult to relieve those who suffer legitimately, so to speak. The following treatment should be persevered in; it will give immediate relief, and, when practicable, should be resorted to twice a day. Do not wait until you go to bed, but if the opportunity offers when you come in, weary and footsore, apply the remedies then:

Soak the feet well in tepid water, to which a little ammonia has been added, and as the water gets cold pour in more hot to keep up the temperature. After drying the feet, rub them gently and thoroughly with a mixture made

Add one ounce of the best linseed oil to the same quantity of lime-water' shake the bottle in which the ingredieats are until a mixture about the thickness of cream is produced, then pour in half a drahm of spirits of camphor, shake again, and it is ready for use. The feet, after being rubbed, should be wrapped in soft linen for a little while, and then powdered with boracic acid before the stockings are replaced. In the event of the feet and ankles being in a very inflamed condition, after soaking them as I have described, apply an arnica lotion, which will soon allay the discomfort. This is made by adding twenty drops of tincture of arnica to a half cupful of tepid water; saturate a piece of lint sufficiently large to envelop the entire foot with the lotion, cover it with a piece of oiled silk, and rest for an hous or two.-Locomotive Firemen's Maga-

# FOR HOME DRESSMAKERS.

The Amateur Dressmaker Finds It Diffi-

cult to Put in Sleeves Correctly. The amateur dressmaker is apt to regard the full, large sleeves as necessitating less care in the putting-in process, but this is a fatal mistake, and ruins an otherwise well-made bodice. It is quite true that the armhole may the grower made a good deal of money be slightly larger where the sleeve is so voluminous, but on a small or narrow figure it is even better to have the armhole too small, as, if much sloped, the bodice is made to look much smaller and narrower, and the big, full sleeve has an almost grotesque effect.

In sloping the armhole let it clear the forward it is not straining against the armhole, nor does it impede the circulation and thereby make the hands | remove, cork the jug and seal it. look red and swollen.

Where the under-arm seam fits into and allow it to move forward, and underneath the arm the bodice should be they can be kept without injury. almost straight and about threequarters of an inch below the armpit. The back is almost straight and close up to the arm, and it should not be forgotten that if the back is sloped out and made quite narrow, the sleeve must drag and prove uncomfortable, as it practically has to do the duty for

a part of the bodice. A very much sloped and too narrow back also looks even less against the wide sleeves, and make the waist look unduly large. Keep the back as broad as possible, even on a large figure, as big sleeves will greatly lessen the ap-

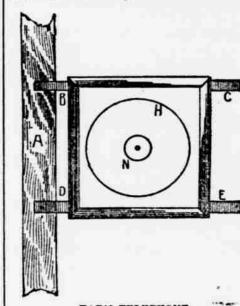

parent width.-Chicago Times. To Remove Creases from Skirts. One is pretty sure to get the skirts of gowns wrinkled in traveling, no matter how carefully they may be packed. the clothesline, stretched out to their extremest width. Every crease will be taken out as entirely as if they had been iraned .- Philadelphia Press.

ing over the drumhead around the edge of the box, mitered together at

the corners. You must use brass or copper wire. We pay 50 cents for a spool of 300 feet. I tried a nice, smooth iron or steel wire for one line, and it worked just as well at first, and as it cost but 10 cents for 300 feet, I thought I had made a valuable discovery; but in a week or two the wire broke and after repeated up. We have had very little trouble with the copper wire, and have not had to repair it at all for a year or more at a time.

In putting the box up we screw the projecting ends of the strips to a door or window casing at one end (at B and D) and then set spools behind the other ends of the strips (at C and E). We attach the wire to the drumhead by passing it through the center and then through a button mold, N, an inch in diameter. This distributes the pressure over a large enough space so that there is no danger of tearing it. The wire should be stretched so tight as to depress the center of the drumhead about an inch, and if at any time the tension gets slack it should be tightened. Keep the wire from resting against the wood where it passes through the hole into the house. This can be done by driving three or four nails around it, leaving the heads out so you can tie strings to them, and pass them around the wire so as to keep it in the center of the hole. Set the poles to which the wire is to be attached a little out of line, so the wire when stretched will be a few inches from them, and then hold it in place by a short cord or loop of wire attached to the pole. If the wire passes through a tree top or hedge, see that the branches are cut away where they would rest on the wire. It seems to me that these directions are plain enough so that anyone can put up a satisfactory telephone. - Waldo F. Brown, in Ohio Farmer.

WINTER pears require careful handling and cool storage. The quality is not at its best unless properly ripened. They can be laid in shallow drawers or on shelves where good ventilation and an even temperature are secured. The quality, when ready for use, depends largely upon the management.

Keeping Seed Potatoes. Experiments have been made regardtion at planting time, and others which have had the sprouts removed. The

loss was found to be considerable. To insure the best grade of seed potatoes it is necessary, if possible, to keep them through the winter and in the spring, up to planting time, at such a temperature that they will not sprout. Any point below freezing will retard the growth. We would also like to hear from our gardeners as to their method of preserving seed potatoes.

CULTURE OF PLUMS.

generally raised because of the diffiso perfectly that on a still night 1 can culties attending the raising of these jectionable, the jam should be strained hear their clock tick by putting my fruits. In many parts of the country it seems almost impossible to raise held against it the ticking is plainly good ones, but where they do well ceptible of great improvement. A good plum tree of the Lombard type bushels of choice fruits, and this means are generally small, and a great many really large.

A good method of starting a plum prchard is to use the place for a chicken range. The work of attending to one would not interfere with the other. There would be mutual advantage and double profit. The trees should be set in holes liberally supplied with bones, either whole or ground, and the most salable varieties are the Lombard, Niagara and Damon, although other good plums could be selected from the Imperial Gage, Purple Egg, Green Gage and Yellow Egg. After the trees are planted far enough apart so that sunlight can be admitted to each one freely, the chickens can be turned on the range. The trees situated between ten and twelve feet apart will afford the shade the chickens need.

The ground should be plowed and harrowed or otherwise turned over once or twice a year, and oats, wheat or grass sown in it. The chickens, of course, will pick most of these seeds up, and scratch for them. But all grain fed to them should be scattered around in the plowed range, which will set them to work scratching. Some of them will grow up and provide free food for poultry. This also keeps the soil constantly stirred, which is beneficial to the trees. The chickens will also pick off worms and insects from the trees and keep them free from all such pest ravages. The droppings of the hens enriches the soil with the

The trees then only need the further attention of thinning out fruit a little and the pruning in the fall. Twothirds of the season's wood growth should be cut back after the leaves have fallen each fall. Black knot should be cut out and burned as soon as patching we were obliged to give it it shows itself. A fine orchard of fruit trees could thus be grown and they would prove very profitable. The fruit is easier to pick and handle than apples or pears and generally more remunerative.

### FOR BERRY BUSHES. A Trellis Suitable for a Small Patch of

Raspberries. A good trellis for raspberry and blackberry bushes is shown in the accompanying sketch. Here we have only single strands of wire, and the bushes must be tied to them in some way. The trellis, therefore, although cheaper than the double trellis, is hardly as convenient, but it will answer, and surely makes a little patch of raspberries or blackberries appear neat and tidy. When blackcaps are grown for evaporating purposes, as a farm crop, they must of necessity be grown cheaply, and spending a lot of money for posts and wires is entirely out of the question. Close pruning is the only practicable method of keeping the bushy growth within bounds, and providing convenient chances for gathering the berries. The

TRELLIS FOR BERRY BUSHES.

do the work thoroughly and in proper season. I do dislike to see the tangled masses of prickly branches so often found in larger patches. For the home garden, however, there is no excuse to allow this state of affairs. A good trellis can easily be provided for the small patch of berry bushes, and it will pay many times its original cost in the greater attractiveness of the garden, in convenience of gathering the fruit, and in satisfaction generally. Make your arrangements for another fruiting season accordingly. The illustration of trellis shows how Mr. Charles Green claimed to be one of the best of red raspberries) to appear when supported by the trellis .- American Gardening.

How Fruit Is Refrigerated. In shipping fruit to Europe, the process of refrigeration is the same as that for the manufacture of artificial ice, so far as cooling is concerned. Coils of iron pipes filled with strong brine are set inside of large boxes filled with compressed ammonia by condensers operated by machinery. Contact of the ammonia with the external surfaces of the brine-filled coils reduces the brine to such a low temperature that when it is forced through straight pipes which traverse the ceilings of the refrigerating compartments, the latter pipes become incrusted with snow-ice about two inches thick, and as the machinery is kept constantly at work, day and night, an even temperature of from 30

# KNOWLEDGE

Brings comfort and improvement and tends to personal enjoyment when rightly used. The many, who live better than others and enjoy life more, with less expenditure, by more promptly adapting the world's best products to the needs of physical being, will attest the value to health of the pure liquid laxative principles embraced in the remedy, Syrup of Figs.

Its excellence is due to its presenting

in the form most acceptable and pleasant to the taste, the refreshing and truly beneficial properties of a perfect lax-ative; effectually cleansing the system, dispelling colds, headaches and fevers and permanently curing constipation. It has given satisfaction to millions and met with the approval of the medical profession, because it acts on the Kidneys, Liver and Bowels without weakening them and it is perfectly free from every objectionable substance.

Syrup of Figs is for sale by all drug-gists in 50c and \$1 bottles, but it is manufactured by the California Fig Syrup Co. only, whose name is printed on every package, also the name, Syrup of Figs, and being well informed, you will not accept any substitute if offered.
